

# The challenge of generating a Platform adapted to the user local requirements

Airbus Defence and Space – ANYWHERE KO meeting

# Challenges of generating a Platform adapted to the user local requirements

- **Identify legacy systems (interfaces) and information flows (organisation and structure, actors, confidentiality)**
- **Translation of operational requirements into (technical) specifications**
- **Gathering all local relevant data:**
  - **static**
  - **dynamic (real time / sensors)**
- **Local legal constraints to take into account**
- **Training capability (regularly or as easy as possible)**
- **Validation with users**

# Challenges of generating a Platform adapted to the user local requirements

- ✚ **Modularity (toolbox approach) and flexibility,**
  - ✚ **Scalable deployment (or hosted),**
  - ✚ **Methodology (iterations with users in the loop)**
  - ✚ **Users' feedback to be handled**
- 
- **Other important aspects:**
    - **Multi-lingual**
    - **Multi-cultural / behavioural**
    - **Adapted to different users (interfaces / ergonomics)**
    - **Everybody can use it ! (easy to use)**
