

QUAN HONG

PROFILE

My academic and professional background has developed my interest in the interaction between climate change, urban development and human societies. I am particularly interested in how climate change and extreme weather affect urban environments, infrastructure and different social groups, and how climate risk assessment can support adaptation and resilience.

EDUCATION

Universitat Autònoma de Barcelona, Spain
MSc in Interdisciplinary Studies in Ecological Economics
Research focus: Post-growth Ecological Economics, sustainability, feminist & decolonial thought and climate justice.

Master's Learning Scope

- Studied the foundations of Ecological Economics, including the relationship between economic systems, environmental limits and social well-being.
- Explored feminist and postcolonial perspectives, climate justice and the governance of common resources.
- Studied sustainability issues in ecological mobility and urban development.
- Developed an interdisciplinary perspective on development, sustainability and climate-related societal challenges.

Master's Thesis

Applied feminism, communalism and decolonialism as a framework to assess Girona's degrowth indicators and identify areas for improvement, using Doughnut Economics as a starting point.

Beijing University for Business Administration
BSc in Civil Engineering

- Background in physical infrastructure, construction processes and cost budgeting.

RESEARCH INTERESTS

- Climate Risk · Extreme Weather Impacts · Vulnerability & Exposure · Urban Resilience · Climate Adaptation
